Warm Up

## WHICH ONE? circle your answer

David chooses 16 but not $17 ; 144$ but not $145 ; 1$ but not 2,100 but not 101 .

Which of these next numbers would David choose?
$24 \quad 49 \quad 122$

Warm Up

## SQUARE ROOTS

$$
\begin{aligned}
& \text { If } x^{2}=4 \text {, then } x=\ldots \text {, or } x=\ldots \text { Why? } \\
& \text { If } x^{2}=64 \text {, then } x=\ldots, \text { or } x=\ldots \quad \text { Why? }
\end{aligned}
$$

If $x^{2}=121$, then $x=$ $\qquad$ , or $x=$ $\qquad$ Why?

## POP - UP \#1

1) $f(x)$ is a linear function represented by the given table of values; which of the following choices
 represents $f(x)$ ?
A) $f(x)=-5 x+1$
B) $f(x)=2 x-3$
C) $f(x)=x^{2}$
D) $f(x)=5$

| $x$ | $f(x)$ |
| :---: | :---: |
| 0 | -3 |
| 1 | -1 |
| 2 | 1 |
| 3 | 3 |
| 10 | 17 |

## POP - UP \#2

2) Fill in the blank,

$$
1,1,4,2,9,3,16,4,25, \ldots, 36,6 .
$$

A) 50
B) 100
C) 5
D) there is no pattern

## POP - UP \#3

For the linear function $y=-2 x+5$; if $x=0$, then $y=$ ?
A) 5
B) -5
C) 2
D) can't be found

## POP - UP \#4

4) Fill in the blank,

$$
81,72,63, \ldots, 45,36, \ldots
$$

A) 54
B) 9
C) 49
D) No pattern

## POP - UP \#5

5) For the linear function $y=10$, for each one unit increase in $x$ the $y$-value is decreased by 10 .
A) True
B) False

## REVISIT - STAIR CASES

| $n=$ <br> pattern \# | $t=$ <br> Total \# of tiles |
| :---: | :---: |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 6 |  |
| 7 |  |
| $n$ |  |

In this exercise, you'll make staireases out of square blocks. Can you figure out a rule or formula for predicting the number of blocks in any staircase?

## REVISIT - STAIR CASES

| $n=$ <br> pattern \# | $\mathrm{t}=$ <br> Total \# of tiles |
| :---: | :---: |
| 1 | 1 |
| 2 | 3 |
| 3 | 6 |
| 4 | 10 |
| 5 | 15 |
| 6 | 21 |
| 7 | 28 |
| $n$ | $\frac{n(n+1)}{2}$ |

In this exercise, you'll make staircases out of square blocks. Can you figure out a rule or formula for predicting the number of blocks in any staircase?

## What's another way of looking at it?

 Make a Rectangle| $\mathrm{n}=$ <br> pattern \# | $\mathrm{t}=$ <br> Total \# of tiles |
| :---: | :---: |
| 1 | 1 |
| 2 | 3 |
| 3 | 6 |
| 4 | 10 |
| 5 | 15 |
| 6 | 21 |
| 7 | 28 |
| n | $\frac{n(n+1)}{2}$ |

## TRIANGULAR NUMBERS

 compare and contrastMake a list of triangular numbers

| $n=$ <br> pattern \# | $t=$ <br> Total \# of tiles |
| :---: | :---: |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 5 |  |
| 6 |  |
| 7 |  |
| $n$ |  |

What are some similarities between the Stair Cases activity and Triangular Numbers?

So, can we find the 50th triangular number?

Student Question: what is the sum of the first 100 whole numbers?? How am I supposed to work this out efficiently? Thanks

Hi Jo,
The question you asked relates back to a famous mathematician, Gauss. In elementary school in the late 1700's, Gauss was asked to find the sum of the numbers from 1 to 100. The question was assigned as "busy work" by the teacher, but Gauss found the answer rather quickly by discovering a pattern. His observation was as follows:

$$
1+2+3+4+\ldots+98+99+100
$$

Gauss noticed that if he was to split the numbers into two groups ( 1 to 50 and 51 to 100 ), he could add them together vertically to get a sum of 101 .

| 1 | +2 | +3 | +4 | +5 | $+\ldots$ | +48 | +49 | +50 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| $\frac{100}{101}$ | +99 | +98 | +97 | +96 | $+\ldots$ | +53 | +52 | +51 |
| 101 | +101 | $\frac{+101}{101}$ | $\frac{101}{101}$ | 101 |  |  |  |  |

## SUM OF FIRST 100 WHOLE NUMBERS

## SO, WHAT DID GAUSS DO?

Gauss realized then that his final total would be $50(101)=5050$.
The sequence of numbers $(1,2,3, \ldots, 100)$ is arithmetic and when we are looking for the sum of a sequence, we call it a series.

Thanks to Gauss, there is a special formula we can use to find the sum of a series:

$$
\begin{aligned}
& S=\frac{n(n+1)}{2} \cdot .0 \text { Lamiliar? } \\
& S=\frac{100(100+1)}{2}=5050
\end{aligned}
$$

## SNAP SHOT

## Write two things you learned TODAY
